

Digital View driver boards are designed to enable and optimize the features and benefits of E Ink based displays

EPL-100 Interface Board: Supports the E Ink 25.3" and 28.1" panels. The EPL-100 is the interface between media players such as the Digital View STM-100 or boards such as the Raspberry Pi models. Any media source that can transmit a BMP image over USB is suitable, for example a PC, Android board, Raspberry Pi, Arduino.

Specifications

- Panels: E Ink color and monochrome models with LVDS interface. Firmware and hardware customization may be required for some future models.
- Input: Micro USB connector
- Image format: BMP

- Functions: Image rotation: 0/90/180/270 degrees, Image mirror, Image flip, Built-in temperature sensor, 16/32 level grey scale mode
- Power input: 12V DC
- Connection to panel: FFC

Digital View enables digital display systems.
